## Most Effective Environmental Educators: SILVER AI Maseera School, Al Showaib

For the TOT award, it is not mandatory for schools to learn only by attending the trainings conducted by the agency. Any source of knowledge, training or workshop is accepted and encouraged.

The AI Maseera School, due to its geographical location was quite far away from more of the agency's training venues and thus was unable to attend any of the TOT workshops provided to schools. However they utilized the Rubric system from ADEC to integrate Environment into all the subjects taught in the school.

They did a thorough analysis of the subjects being taught and identified chapters in the lessons where an environmental issue could be incorporated. This combined with the workshop they attended by EAD & ADEC which launched the green curriculum for schools, gave them a lot of resource materials that they were introduced to. The resource book for intermediate teachers entitled "Towards a Sustainable World" in particular caught their attention. They requested for the manual and ensured that all the chapters were implemented in various subjects for the intermediate classes in their school. They also tried to adapt some of the activities to conduct it with the secondary students of the schools.
