## Most Sustainable School: **BRONZE** Aisha Bint Abi Baker School, Abu Dhabi

The Aisha Bint Abi Baker School has been participating in this programme since three years now. In their first year, they completed the project successfully, keeping the focus on assessing their environmental performance. In their second year, they worked on managing their waste more wisely and on increasing their outreach from the Eco Club.

Their Eco Club worked very hard to involve the students, school teachers and the extended school community. Their projects were all inclusive and had many hands contributing to a joint cause. They also worked on improving their performance in all the four components in the audit.

Most of all, their enthusiasm for the project also got their management to support them for this cause; together they have managed to make a significant difference in improving the overall environmental efficiency of the school.
